

# BUBBLE CHANDELIER LIGHT

**WARNING** Never take risks with electrical safety. Always disconnect the mains power before beginning any electrical work and test that it is isolated - it is NOT enough just to turn off the light switch. Electrical products must be installed in accordance with IET regulations (BS 7671). If you are in any doubt, always consult a qualified electrician or an experienced person registered with an electrical Competent Person Scheme. Further information is available online or from your Local Authority. If the lighting circuit is not protected by a Residual Current Device (RCD) then the installation should be carried out and tested by a qualified electrician. If necessary, use a suitable stepladder, but first read the useful advice given by the Health and Safety Executive. Visit [www.hse.gov.uk](http://www.hse.gov.uk) and search for 'using stepladders'.

## Fitting the glass baubles to your light

- 1 Insert your bulb into the bulb holder before adding the glass baubles.
- 2 Take your first glass bauble and position it over the metal hook. See Fig. 1
- 3 Gently slide the glass bauble over the metal hook. See Fig. 2
- 4 Do not let the glass bauble drop into place, glide it there carefully. See Fig. 3
- 5 Once in position, add the next glass bauble onto the opposite metal hook. This will balance the structure and avoid any breakages. See Fig. 4
- 6 Repeat steps 2 - 5 until all the glass baubles have been arranged.

*Note: When changing the light bulb we would recommend you remove the glass baubles. This will avoid breakages.*
